

CP in last frame = Happy Ending?

12 June, 2022

This is a bullshit analysis to test the hypothesis “If the main couple is shown together in the last frame of the ending song, then there will be a happy ending”. Classification of “happy ending” and “couple in last frame” is in unscientific and totally biased fashion done by myself.

```
## [1] "number of dramas in dataset: 29"
```

```
##
## FALSE  TRUE
##      16    13
```

```
##
## FALSE  TRUE
##      19    10
```

```
## [1] "dramas with happy ending: 44.83 %"
```

```
## [1] "dramas with CP in last frame: 34.48 %"
```

```
## [1] "Of dramas with CP not in last frame, 31.58 % have a happy ending"
```

```
## [1] "Of dramas with CP in last frame, 70 % have a happy ending"
```

```
##
## Fisher's Exact Test for Count Data
##
## data:  m
## p-value = 0.0641
## alternative hypothesis: true odds ratio is not equal to 1
## 95 percent confidence interval:
##  0.7552242 39.1518723
## sample estimates:
## odds ratio
##  4.751826
```
